Yuheng ZHOU

Email: yuheng.zhou@warwick.ac.uk | **Tel:** +44 07879922747 / +86 13814523689
Date of Birth: 4th July 1996 | **Place of Birth:** Jiangsu Province, China

EDUCATION BACKGROUND

The University of Warwick **09/2025 - 07/2026 (Expected)**
Master of Science in Applied Artificial Intelligence
- **Grade:** Current weighted 70.5%
- **Core Modules:** Programming for Artificial Intelligence, Data Mining, Artificial Intelligence and Deep Learning, Applied Statistics for Artificial Intelligence, Artificial Intelligence for Industry, etc.

University of Hertfordshire **09/2024 - 06/2025**
Bachelor of Science (Honours) in Computer Science
- **Grade:** First-Class (73.67%)
- **Core Modules:** Internet of Things, Mobile Computing, Real-time and Control Systems, Responsible Computing, Robotics, Software Architecture, etc.

Santa Clara University **09/2019 - 06/2021**
Bachelor of Science in Computer Science (Coursework Completed; Transferred)
- **Core Modules:** Artificial Intelligence, Programming Languages, Data Science, Probability & Statistics, Introduction to Embedded Systems, Operating Systems, Linear Algebra, etc.

INTERNSHIP EXPERIENCE

SIP Lab, The University of Warwick **Coventry, UK** **12/2025 – Present**
Research Assistant
- Supported journal revision by interpreting reviewer feedback and designing additional experiments to address concerns.
- Acquired hands-on experience in dataset curation, experimental design, and reproducible evaluation for deepfake detection research.

Jiangsu Nangao Intelligent Equipment Innovation Centre **Nanjing, China** **12/2022 - 06/2023**
Software Engineer Intern
- Developed communication protocols to interface with specific models of Programmable Logic Controllers (PLCs), enabling company products to support a broader range of PLC read/write operations.
- Conducted technical research and participated in the development of Interactive Electronic Technical Manuals (IETMs).
- Gained proficiency in low-level programming languages and enhanced software engineering skills through practical application.
- Acquired hands-on experience with version control tools within a collaborative development environment.

Xiamen Mufan Information Technology Ltd. **Xiamen, China** **06/2022 - 12/2022**
Software Engineer Intern
- Designed and developed an interactive educational software package for teaching Scratch programming to primary school students.
- Served as lead editor and co-author of accompanying teaching materials, including textbooks and lesson plans (not published).

NihaoPay, Aurfy Inc. **Santa Clara, CA, US** **06/2019 - 03/2020**
Business Development Intern
- Supported business development initiatives by identifying potential partnerships and assisting with client communications and onboarding.
- Participated in backend API maintenance and minor feature development, enhancing cross-functional understanding between commercial and technical teams.
- Strengthened analytical and communication skills within a fast-paced fintech start-up environment.

ZTE Corporation, Nanjing R&D Centre **Nanjing, China** **05/2016 - 08/2016**
Software Engineer Intern

- Worked with the Big Data team to gain exposure to distributed computing systems and large-scale data processing frameworks.
- Acquired foundational knowledge and practical experience in Hadoop ecosystem tools and big data technologies.
- Assisted in the implementation and testing of internal data solutions under the supervision of senior engineers.

PROJECT EXPERIENCE

Master Dissertation Project – LLM-based Front-end for Automation and Robotics Code Generation
01/2026 - Present

- Focusing on how to implement an LLM-based front-end for IEC 61499 industrial robots to replace traditional development methods.

Undergraduate Capstone Project – Lottery Prediction Using Machine Learning **12/2024 - 04/2025**

- Developed a lottery number prediction system with GUI using historical data from the "Union Lotto" lottery, collected via custom web crawlers.
- Engineered statistical feature extraction pipelines and applied various machine learning algorithms to predict winning combinations.

Robotics Course Project – Autonomous Obstacle-Avoiding Robot **03/2025 - 04/2025**

- Designed and implemented an autonomous robot within the Gazebo simulation environment, utilizing modular components and multiple sensors.
- Integrated ROS2 middleware to enable sensor communication, camera control, and autonomous obstacle avoidance behaviour.
- Achieved stable and reliable obstacle avoidance, demonstrating effective sensor fusion and real-time decision-making.

IoT Course Project – Cleanroom Monitoring System with LoRa Communication **09/2024 - 12/2024**

- Designed and implemented a cleanroom monitoring system based on the Internet of Things (IoT) layered architecture.
- Enabled long-range, low-power wireless communication between the transmitter and receiver using LoRa technology.
- Successfully demonstrated reliable remote monitoring and secure data transmission in a simulated cleanroom context.

Real-Time Control Systems Project – Line-Following and Vision-Based Autonomous Robots
09/2024 - 12/2024

- Programmed an *Initio* mobile robot to follow lines using IR sensors, and implemented a vision-based system using a camera and BLOB detection algorithms.
- Enabled the robot to follow a target object while maintaining distance, simulating basic autonomous driving functionalities.
- Demonstrated successful integration of sensor data and real-time control for navigation and pursuit tasks.

Twitter Bot – "Fake Harry Potter Facts" Generator **06/2020 - 08/2020**

- Developed a Twitter bot that connected to the Twitter API and generated theme-based tweets using a Markov Chain text-generation algorithm.
- Focused on producing creative and humorous "fake facts" in the Harry Potter universe, ensuring linguistic coherence and relevance of content, and deployed the bot to post tweets on a scheduled basis.

Volunteer Software Tester for Prof. David Touretzky (Carnegie Mellon University) 10/2018 - 04/2019

- Participated in testing the *Calypso* visual programming framework developed for the Cozmo robot by Prof. David Touretzky.
- Conducted functional testing, bug identification, and user experience evaluations to support early-stage development.
- Provided detailed feedback that contributed to the refinement of the platform, earning positive recognition from the professor.
